PROPOSAL NUMBER:

STUDY NUMBER:

TXT\_DISCUSSION:

I had several discussions with Robin regarding the pilot TES analytical data and reporting the correct number of significant figures. I reminded Robin that the calculated values from CCLS were reported to 3 decimal places (the CCLS database requires a set no. of decimal places to be reported and is not based on significant figures) and those are the values that the CRU used for statistical analyses. If Covance is required to round the values and report fewer decimal places or significant figures, the statistical analyses that have already been completed would need to be redone. I explained that we have learned from the pilot study that reporting the calculated values to 3 decimal places may not be appropriate and that we could revise this for the TES.

She indicated that she would discuss with their QA and Bettie Nelson on Friday, 06/14, but indicated that we should proceed as we have been. She also indicated that Philip Morris could revise the data internally if necessary before reporting the data to the scientific community.
